EXPERIENCE

Bronx Academy for Software Engineering, 2474 Crotona Ave, Bronx, NY 10458 — *Website manager*

December 2020 - 2023

During my stay at BASE I got experience collaborating on web development teams. I, along with my colleagues, were responsible for the maintenance and updating of the school website(<https://www.bronxsoftware.org/>). During my stay I recreated a more modern look for the site which we were unable to implement due to contract revisions. However the website has been updated as of my graduation.

FEATURED PROJECTS

Website Portfolio — <https://portfoliowastaken.netlify.app/>

In this project my main goal was to showcase my responsive mobile first web design while creating something that can be infinitely improved upon using the skills I acquired through my journey as a web developer thus showing you (my employer) what I'm capable of building.

Repository : <https://github.com/Dimethyl-tryptamine/Portfolio-Website>

EverGreen Estates — <https://evergreenestates.netlify.app/>

In this project my main goal was to showcase a fully polished and working e-commerce website while creating something that can be infinitely improved upon using the skills I acquired through my journey as a web developer thus showing you (my employer) what I'm capable of building and maintaining. It also serves as a testing ground for any new technologies I might learn.

EDUCATION

Laguardia Community College, 31-10 Thomson Ave, Long Island City, NY 11101 — *Computer science (AS)*

September 2025 - PRESENT

Currently I am planning to use my connections at Laguardia community college to find a team where my skills and experience can be applied in the professional world learning as I go.

Bronx Academy for Software Engineering, 2474 Crotona Ave, Bronx, NY 10458 — *GED*

September 2020 - June 2024

I began high school during the pandemic where my interest in coding blossomed. My stay at BASE turned that passion into expertise, expertise I would later use to land internships and begin my web development journey. During my stay I took python classes which introduced me to the back-end aspect of web development. And future prospects in data and ML engineering.

SKILLS

React

TypeScript

JavaScript (ES6+)

Tailwind CSS

Motion (animations)

WORKING ON

React component architecture (state flow, reusable design patterns)

Redux (state management)

Next.js

Vite

API integration

LANGUAGES

English

Spanish
